

# Übungen zur Vorlesung: Wissensbasierte Systeme

## Blatt 1

### Exercise 1.1:

Given the knowledge base:

$a \leftarrow b \wedge c.$

$a \leftarrow e \wedge f.$

$b \leftarrow d.$

$b \leftarrow f \wedge h.$

$c \leftarrow e.$

$d \leftarrow h.$

$e.$

$f \leftarrow g.$

$g \leftarrow c.$

- Give a model of the knowledge base.
- Give an interpretation that is not a model of the knowledge base.
- Give two atoms that are logical consequences of the knowledge base.
- Give two atoms that are not logical consequences of the knowledge base.

### Exercise 1.2:

Consider the language that contains the constant symbols  $a$ ,  $b$ , and  $c$ ; the predicate symbols  $p$  and  $q$ ; and no function symbols. We might also have the following knowledge bases built from this language:

$$KB_1 = \{ p(a) \}.$$

$$KB_2 = \{ p(X) \leftarrow q(X) \}.$$

$$KB_3 = \{ p(X) \leftarrow q(X), \\ p(a), \\ q(b) \}.$$

Now consider possible interpretations for this language of the form  $I = (D, \pi, \phi)$ , where  $D$  consists of exactly four domain elements,  $w$ ,  $x$ ,  $y$ , and  $z$ .

- How many interpretations with the four domain elements exist for our simple language? Give a brief justification for your answer. Hint: Consider how many possible assignments  $\phi$  exist for the constant symbols, and consider how many extensions predicates  $p$  and  $q$  can have to determine how many assignments  $\pi$  exist. Don't try to enumerate all possible interpretations.
- Of the interpretations outlined above, how many are models of  $KB_1$ ? Give a brief justification for your answer.
- Of the interpretations outlined above, how many are models of  $KB_2$ ? Give a brief justification for your answer.
- Of the interpretations outlined above, how many are of  $KB_3$ ? Give a brief justification for your answer.

**Exercise 1.3:**

Given the knowledge base  $KB$  containing the clauses:

$$a \leftarrow b \wedge c.$$
$$b \leftarrow d.$$
$$b \leftarrow e.$$
$$c.$$
$$d \leftarrow h.$$
$$e.$$
$$f \leftarrow g \wedge b.$$
$$g \leftarrow c \wedge k.$$
$$j \leftarrow a \wedge b.$$

- (a) Show how the bottom-up proof procedure works for this example. Give all logical consequences of  $KB$ .
- (b)  $f$  isn't a logical consequence of  $KB$ . Give a model of  $KB$  in which  $f$  is false.
- (c)  $a$  is a logical consequence of  $KB$ . Give a top-down derivation for the query  $?a$ .
